

ABSTRACT

A method and a communication network are provided for
5 supplying a receiver, such as a Set Top Box connected
to the network, with tuning information for services
provided on the network. A database is compiled com-
prising a plurality of service identifiers identifying
the provided services and a plurality of sets of tuning
10 parameters. Each of the sets is associated with a
respective one of said plurality of service
identifiers. Tuning parameters for a requested service
are retrieved by accessing said database through one of
said plurality of service identifiers and using said
15 retrieved tuning parameters for tuning said receiver.
The method and the network provide a flexible way of
supplying information. A subscriber terminal and a com-
puter program product are also provided.
